

Amendments to the Specification

Please amend the Abstract of the Specification as shown below. Applicants have attached a clean version of the Abstract including all changes shown below.

ABSTRACT

The invention relates to a process for finish-machining of ~~the~~ bearing positions (11) on main bearing journals and connecting rod bearing journals of crankshafts (1) for motor car engines, whereby the crankshafts (1) have roundings (14) between the bearing positions and ~~the~~ transitions (7) adjacent in each case to the bearing positions (11). The roundings (14) are deep rolled with a deep rolling tool and then, while maintaining a distance interval (17) to [[the]] an individual transition (7) in each case the bearing position (11) concerned is machined with removal of material with a small cutting depth (18, 20).

~~Fig. 4 is intended for the abstract.~~
